Risk Factors

Charges to Capital

These funds take part or all of the annual management charges from capital rather than the income generated by the fund, increasing the potential for the capital value of your investment to be eroded.

Inflation

Inflation will reduce the real value of your investments in future.

Long Term Investments

Stock market investments should be regarded as long term investments.

Returns are not guaranteed

What you receive when you sell your investment is not guaranteed, it depends on how your investments perform.

Taxation and tax relief

Levels of taxation and tax relief are subject to change.

Value of Investments

The value of investments and the income you receive from them can fall as well as rise.

Derivative Exposure

The fund invests in derivatives as part of its investment strategy, over and above their use for Efficient Portfolio Management (EPM). Investors should be aware that the use of these instruments can, under certain circumstances, increase the volatility and risk profile of the Fund beyond that expected of a fund that only invests in equities. The fund may also be exposed to the risk that the company issuing the derivative may not honour their obligations which in turn could lead to losses arising.

Emerging Markets

Emerging markets are generally less well regulated than the UK and it can sometimes be difficult to buy and sell investments in these areas. There is also an increased chance of political and economic instability and so these funds carry higher risks than those investing in larger, more established markets.

Exchange Rate

The value of investments and any income from them may decrease or increase as a result of changes in exchange rates between currencies.

High Yield Bonds

These funds invest in high yield bonds, which carry a greater risk of default than investment grade corporate bonds. Economic conditions will also have a greater effect on their price.
